## **IN THE CLAIMS:**

Kindly cancel claims 2 and 3 without prejudice.

## Please amend claims 1, 4-15, 17-21, 23 and 25, as follows:

- 1. (Currently amended) A router controlling congestion on links attached to the 1 router, said router comprising: 2 a plurality of ports; 3 a first port of said plurality of ports for receiving a data packet; 4 a second port of said plurality of ports for transmitting said data packet; 5 a receiver to receive an incoming loss report message on said second port; 6 a first processor to determine loss of packets on selected ports of said plurality of 7 ports; 8 9 a second processor to calculate, in response to said incoming loss report message and said loss of packets, a loss rate statistic; 10 a transmitter to transmit an outgoing loss report message through said first port, 11 said outgoing loss report message containing a field having said loss rate statistic written 12 therein. 13
- 1 2. (Canceled)
- 1 3. (Canceled)
- 1 4. (Currently amended) The apparatus router as in claim 1 wherein said loss rate
- statistic is a largest loss rate determined by said router in a set of loss rates determined for
- 3 said selected ports of said plurality of ports.

a plurality of ports;

tion on links attached to the router, said router comprising:

6. (Currently amended) The apparatus router of claim 1, further comprising: 1

wherein said loss rate statistic is a time averaged loss rate.

a first port of said plurality of ports for receiving a data packet;

a second port of said plurality of ports for transmitting said data packet;

a linecard supporting at least one of said plurality of ports, said linecard 2

(Currently amended) The apparatus as in claim 1 A router controlling conges-

- having a linecard said first processor and a memory mounted thereon, said linecard first 3
- processor computing said loss of packets. 4
- 7. (Currently amended) The apparatus-router of claim 1, further comprising: said 1
- outgoing loss report message is carried in a NAK packet. 2
- 8. (Currently amended) The apparatus router of claim 1, further comprising: said 1
- 2 outgoing loss report message is transmitted by said router in response to the router re-
- ceiving a loss report message from a downstream router. 3

5.

1

2

3

5

14

- 9. (Currently amended) The apparatus router of claim 1, further comprising: said
- 2 outgoing loss report message is transmitted by said router in response to the router re-
- ceiving a loss report message from a target downstream receiver station.
- 1 10. (Currently amended) The apparatus router of claim 1, further comprising: said
- 2 <u>outgoing</u> loss report message is periodically transmitted by said router.
- 1 11. (Currently amended) The apparatus-router of claim 1, further comprising:
- a central processor (CPU) forwarding engine, said CPU forwarding engine deter-
- mining which port said <u>outgoing</u> loss report message is to be transmitted-out through.
- 1 12. (Currently amended) The apparatus-router as in claim 1, further comprising:
- a central processor (CPU) control engine, said CPU control engine generating said
- 3 <u>outgoing</u> loss report message.
- 1 13. (Currently amended) A method for operating a router, <u>said method comprising</u>:
- receiving a multicast group data packet at a first port;
- transmitting a replica of said multicast group data packet from a second port;
- 4 receiving an incoming loss report message on said second port;
- 5 computing a loss of packets on selected ports of said router;
- 6 calculating, in response to said incoming loss report message and said loss of
- 7 packets, a loss rate statistic;
- transmitting an outgoing loss report message through said first port, said outgoing
- 9 loss report message containing said loss rate statistic in a field of said outgoing loss re-
- 10 port message.
  - 14. (Currently amended) The method of claim 13, further comprising:
- 2 choosing said loss rate statistic as a largest packet loss rate in a set of loss rates
- 3 computed for said selected ports of said router. determined by said router.

1	15.	(Currently amended) The method of claim 13, further comprising: A method for	
2	opera	ting a router, said method comprising:	
3		receiving a multicast group data packet at a first port;	
4		transmitting a replica of said multicast group data packet from a second port;	
5		receiving an incoming loss report message on said second port;	
6		computing a loss of packets on selected ports of said router;	
7		calculating, in response to said incoming loss report message and said loss of	
8	packe	ets, a loss rate statistic;	
9		transmitting an outgoing loss report message through said first port, said outgoing	
0	loss r	eport message containing said loss rate statistic in a field of said outgoing loss re-	
1	port message; and		
2		choosing said loss rate statistic as a time averaged packet loss rate as determined	
13	by sai	d router.	
1	16.	(Original) The method of claim 13, further comprising:	
2		selecting said selected ports as members of a multicast group distribution tree.	
1	17.	(Currently amended) The method of claim 13, further comprising:	
2		determining a loss rate statistic which has not expired at "at least one", for at least	
3	one p	one port of said router, where said at least one port includes all ports of a multicast group	
4	distribution tree of said multicast group;		
5		writing said loss rate statistic into said outgoing loss report message packet and	
6	before	e transmitting said outgoing loss report-packet message.	
1	18.	(Currently amended) The method of claim 13, further comprising: transmitting	
2	said o	utgoing loss report <del>packet message</del> as a NAK packet	

- 19. (Currently amended) The method of claim 13, further comprising; transmitting 1
- said outgoing loss report packet message in response to receiving said incoming loss re-2
- port <del>packet</del>message. 3
- 20. (Currently amended) The method of claim 13, further comprising: transmitting 1
- said outgoing loss report packet message periodically. 2
- 21. (Currently amended) The method of claim 13, further comprising: transmitting 1
- said outgoing loss report message as a unicast message to the-a next upstream router ca-2
- pable of responding to said outgoing loss report message.
- 22. (Original) The method of claim 13 further comprising: transmitting said outgoing loss report message as a multicast message.
- 23. (Currently amended) A router, comprising: 1
- means for receiving a multicast group data packet at a first port; 2
- means for transmitting a replica of said multicast group data packet from a second 3
- port; 4
- means for receiving an incoming loss report message on said second port; 5
- means for computing a loss of packets on selected ports of said router; 6
- means for calculating, in response to said incoming loss report message and said 7
- loss of packets, a loss rate statistic; 8
- means for transmitting an outgoing loss report message through said first port, 9
- said outgoing loss report message containing said loss rate statistic in a field of said out-10
- 11 going loss report message.
- (Original) A computer readable media having instructions written thereon for
- practicing the method of claim 13. 2

Agint.

- 21\_25. (Currently amended) Electromagnetic signals carried on a computer network,
- said electromagnetic signals carrying instructions for practicing the method of claim 13.

## Please add the following new claims 26-et al.:

- 1 26. (New) The router as in claim 1, wherein said outgoing loss report message is re-
- 2 ceived at a source station of a multicast distribution tree, said source station controlling a
- transmission rate of data packets transmitted in said multicast distribution tree based on
- 4 the value of said loss rate statistic stored in said outgoing loss report message.
- 1 27. (New) The method as in claim 13, further comprising:
  - receiving said outgoing loss report message at a source station of a multicast distribution tree; and
- 4 controlling, in response to receiving said outgoing loss report message, a trans-
- 5 mission rate of data packets transmitted by said source station in said multicast distribu-
- tion tree based on the value of said loss rate statistic stored in said outgoing loss report
- 7 message.
- 1 28. (New) The router as in claim 1, wherein said outgoing loss report message is not
- transmitted by said transmitter if an absolute value of a fractional change of said loss rate
- statistic, as compared with a previous loss rate statistic, is less than or equal to a prede-
- 4 termined limit value.
- 1 29. (New) The method as in claim 13, further comprising:
- 2 calculating an absolute value of a fractional change of said loss rate statistic as
- 3 compared with a previous loss rate statistic; and
- 4 preventing, in response to said calculated absolute value being less than or equal
- to a predetermined limit value, transmission of said outgoing loss report message.

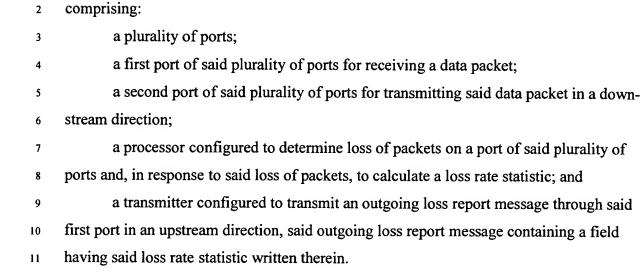

٠,

- 1 30. (New) The router as in claim 1, wherein said outgoing loss report message stores
- a lifetime associated with said loss rate statistic, said lifetime indicating a duration of
- time for which said loss rate statistic is valid.
- 31. (New) The method of claim 13, further comprising:
- associating with said loss rate statistic a lifetime for aging said loss rate statistic;
- determining whether said loss rate statistic is valid based on the value of said life-
- 4 time associated with said loss rate statistic; and
- writing, in response to determining that said loss rate statistic is valid, said loss
- 6 rate statistic into said outgoing loss report message before transmitting said outgoing loss
- 7 report message.

1	32.	(New) A router controlling congestion on links attached to the router, said router
2	compr	ising:
3		a plurality of ports;
4		a first port of said plurality of ports for receiving a data packet;
5		a second port of said plurality of ports for transmitting said data packet;
6		a receiver configured to receive an incoming loss report message on said second
7	port;	
8		a processor configured to determine loss of packets on selected ports of said plu-
9	rality o	of ports, said processor being further configured to calculate, in response to said
10	incomi	ng loss report message and said loss of packets, a loss rate statistic; and
11		a transmitter configured to transmit an outgoing loss report message through said
12	first po	ort, said outgoing loss report message containing a field having said loss rate statis-
13	tic writ	tten therein.

33.

1

1

3

- 34. (New) The router as in claim 33, further comprising:
- a receiver to receive a loss report message on said second port, said loss report 2 travelling in said upstream direction; and

(New) A router controlling congestion on links attached to the router, said router

- said processor to calculate said loss rate statistic in response to said loss of pack-4
- ets and in response to said loss report. 5
- 35. (New) The router as in claim 33, further comprising: 1
- 2 said loss rate statistic is a largest loss rate in a set of loss rates determined for said selected ports of said plurality of ports. 3
- 36. (New) The router as in claim 33, further comprising: 1
- said loss rate statistic is a time averaged loss rate. 2
- 37. (New) The router of claim 33, further comprising: 1
- a linecard supporting at least one of said plurality of ports, said linecard having a 2
- linecard processor and a memory mounted thereon, said linecard processor computing 3
- said loss of packets. 4

- 1 38. (New) The router of claim 33, further comprising:
- a central processor (CPU) forwarding engine, said CPU forwarding engine deter-
- mining which port said outgoing loss report message is to be transmitted.
- 1 39. (New) The router as in claim 33, further comprising:
- a central processor (CPU) control engine, said CPU control engine generating said
- 3 outgoing loss report message.
- 1 40. (New) The router of claim 33, further comprising:
- said outgoing loss report message is carried in a NAK packet.
- 1 41. (New) The router of claim 33, further comprising:
- said outgoing loss report message is transmitted by said router in response to the
- 3 router receiving a loss report message from a downstream router.
- 1 42. (New) The router of claim 33, further comprising:
- said outgoing loss report message is periodically transmitted by said router.
- 1 43. (New) The router as in claim 33, further comprising:
- said outgoing loss report message is received at a source station of a multicast
- distribution tree, said source station controlling a transmission rate of data packets trans-
- 4 mitted in said multicast distribution tree based on the value of said loss rate statistic
- stored in said outgoing loss report message.
- 1 44. (New) The router as in claim 33, further comprising:
- means for receiving said outgoing loss report message at a source station of a
- 3 multicast distribution tree; and
- 4 means for controlling, in response to receiving said outgoing loss report message,
- a transmission rate of data packets transmitted by said source station in said multicast

- 6 distribution tree based on the value of said loss rate statistic stored in said outgoing loss
- 7 report message.
- 1 45. (New) The router as in claim 33, further comprising:
- said outgoing loss report message is not transmitted by said transmitter if an ab-
- solute value of a fractional change of said loss rate statistic, as compared with a previous
- 4 loss rate statistic, is less than or equal to a predetermined limit value.
- 1 46. (New) The router as in claim 33, further comprising:
- said outgoing loss report message stores a lifetime associated with said loss rate
- statistic, said lifetime indicating a duration of time for which said loss rate statistic is
- 4 valid.
- 1 47. (New) A method for operating a router, comprising:
- receiving a data packet travelling in a downstream direction at a first port;
- transmitting a replica of said data packet from a second port in said downstream
- 4 direction;
- computing a loss of packets on selected ports of said router;
- 6 calculating, in response to said loss of packets, a loss rate statistic; and
- transmitting an outgoing loss report message through said first port in an upstream
- 8 direction, said outgoing loss report message containing said loss rate statistic in a field of
- 9 said outgoing loss report message.
- 1 48. (New) The router as in claim 47, further comprising:
- receiving a loss report message on said second port, said loss report travelling in
- 3 said upstream direction; and
- 4 calculating said loss rate statistic in response to said loss of packets and in re-
- sponse to said loss report.

- 1 49. (New) The method of claim 47, further comprising:
- 2 calculating said loss rate statistic as a largest loss rate in a set of loss rates deter-
- mined for said selected ports of said plurality of ports.
- 1 50. (New) The method of claim 47, further comprising:
- 2 calculating said loss rate statistic as a time averaged loss rate.
- 1 51. (New) The method of claim 47, further comprising:
- computing said loss of packets by a processor mounted on a linecard, said line-
- card supporting at least one of said plurality of ports, said linecard having said linecard
- 4 processor and a memory mounted thereon.
- 1 52. (New) The method of claim 47, further comprising:
- determining which port said outgoing loss report message is to be transmitted by a
- 3 central processor (CPU) forwarding engine.
- 1 53. (New) The method as in claim 47, further comprising:
- 2 generating said outgoing loss report message by a central processor (CPU) control
- 3 engine.
- 1 54. (New) The method of claim 47, further comprising:
- 2 carrying said outgoing loss report message in a NAK packet.
- 1 55. (New) The method of claim 47, further comprising:
- transmitting said outgoing loss report message by said router in response to the
- 3 router receiving a loss report message from a downstream router.
- 1 56. (New) The method of claim 47, further comprising:
- transmitting said outgoing loss report message periodically by said router.

Agy.	
1 //	

- 1 57. (New) The method as in claim 47, further comprising:
- transmitting said outgoing loss report message upstream so that it can be received
- at a source station of a multicast distribution tree, said source station controlling a trans-
- 4 mission rate of data packets transmitted in said multicast distribution tree based on the
- value of said loss rate statistic stored in said outgoing loss report message.
- 1 58. (New) The method as in claim 47, further comprising:
- receiving said outgoing loss report message at a source station of a multicast dis-
- 3 tribution tree; and
- 4 controlling, in response to receiving said outgoing loss report message, a trans-
- 5 mission rate of data packets transmitted by said source station in said multicast distribu-
- tion tree based on the value of said loss rate statistic stored in said outgoing loss report
- 7 message.

1

- 59. (New) The method as in claim 47, further comprising:
- 2 calculating an absolute value of a fractional change of said loss rate statistic as
- 3 compared with a previous loss rate statistic; and
- 4 preventing, in response to said calculated absolute value being less than or equal
- to a predetermined limit value, transmission of said outgoing loss report message.
- 1 60. (New) The method of claim 47, further comprising:
- 2 associating with said loss rate statistic a lifetime for aging said loss rate statistic;
- determining whether said loss rate statistic is valid based on the value of said life-
- 4 time associated with said loss rate statistic; and
- writing, in response to determining that said loss rate statistic is valid, said loss
- 6 rate statistic into said outgoing loss report message before transmitting said outgoing loss
- 7 report message.

- 1 61. (New) A router, comprising:
- means for receiving a data packet travelling in a downstream direction at a first
- 3 port;
- 4 means for transmitting a replica of said data packet from a second port in said
- 5 downstream direction;
- 6 means for computing a loss of packets on selected ports of said router;
- means for calculating, in response to said loss of packets, a loss rate statistic;
- means for transmitting an outgoing loss report message through said first port in
- 9 an upstream direction, said outgoing loss report message containing said loss rate statistic
- in a field of said outgoing loss report message.
- 1 62. (New) The router as in claim 61, further comprising:
- means for receiving a loss report message on said second port, said loss report
- 3 travelling in said upstream direction; and
- 4 means for calculating said loss rate statistic in response to said loss of packets and
- in response to said loss report.
- 1 63. (New) The router of claim 61, further comprising:
- means for calculating said loss rate statistic as a largest loss rate in a set of loss
- rates determined for said selected ports of said plurality of ports.
- 1 64. (New) The router of claim 61, further comprising:
- means for calculating said loss rate statistic as a time averaged loss rate.
- 1 65. (New) The router of claim 61, further comprising:
- means for computing said loss of packets by a processor mounted on a linecard,
- said linecard supporting at least one of said plurality of ports, said linecard having said
- 4 linecard processor and a memory mounted thereon.

- 1 66. (New) The router of claim 61, further comprising:
- 2 means for determining which port said outgoing loss report message is to be
- transmitted by a central processor (CPU) forwarding engine.
- 1 67. (New) The router as in claim 61, further comprising:
- means for generating said outgoing loss report message by a central processor
- 3 (CPU) control engine.
- 1 68. (New) The router of claim 61, further comprising:
- means for carrying said outgoing loss report message in a NAK packet.
- 1 69. (New) The router of claim 61, further comprising:
- means for transmitting said outgoing loss report message by said router in re-
- sponse to the router receiving a loss report message from a downstream router.
- 1 70. (New) The router of claim 61, further comprising:
- means for transmitting said outgoing loss report message periodically by said
- 3 router.
- 1 71. (New) The router as in claim 61, further comprising:
- means for transmitting said outgoing loss report message upstream so that it can
- be received at a source station of a multicast distribution tree, said source station control-
- 4 ling a transmission rate of data packets transmitted in said multicast distribution tree
- based on the value of said loss rate statistic stored in said outgoing loss report message.
- 1 72. (New) The router as in claim 61, further comprising:
- means for receiving said outgoing loss report message at a source station of a
- 3 multicast distribution tree; and

 $\sqrt{3}$ 

- means for controlling, in response to receiving said outgoing loss report message.
- a transmission rate of data packets transmitted by said source station in said multicast
- distribution tree based on the value of said loss rate statistic stored in said outgoing loss
- 7 report message.
- 1 73. (New) The router as in claim 61, further comprising:
- means for calculating an absolute value of a fractional change of said loss rate
- statistic as compared with a previous loss rate statistic; and
- 4 means for preventing, in response to said calculated absolute value being less than
- or equal to a predetermined limit value, transmission of said outgoing loss report mes-
- 6 sage.

1

- 74. (New) The router of claim 61, further comprising:
- means for associating with said loss rate statistic a lifetime for aging said loss rate
- 3 statistic;
- 4 means for determining whether said loss rate statistic is valid based on the value
- of said lifetime associated with said loss rate statistic; and
- 6 means for writing, in response to determining that said loss rate statistic is valid,
- said loss rate statistic into said outgoing loss report message before transmitting said out-
- 8 going loss report message.
  - 75. (New) A computer readable media, comprising:
- said computer readable media having instructions written thereon for execution on
- a processor for the practice of a method of operating a router, the method having the steps
- 4 of,

1

- receiving a multicast group data packet at a first port;
- transmitting a replica of said multicast group data packet from a second port;
- receiving an incoming loss report message on said second port;

calculating, in response to said incoming loss report message and said loss of
packets, a loss rate statistic;
transmitting an outgoing loss report message through said first port, said outgoing
loss report message containing said loss rate statistic in a field of said outgoing loss report message.

1

2

3

4

5

76. (New) Electromagnetic signals propagating on a computer network, comprising: 1 said electromagnetic signals carrying instructions for execution on a processor for 2 the practice of a method of operating a router, the method having the steps of, 3 receiving a multicast group data packet at a first port; transmitting a replica of said multicast group data packet from a second port; 5 receiving an incoming loss report message on said second port; 6 computing a loss of packets on selected ports of said router; 7 calculating, in response to said incoming loss report message and said loss of 8 packets, a loss rate statistic; 9 transmitting an outgoing loss report message through said first port, said outgoing 10 loss report message containing said loss rate statistic in a field of said outgoing loss re-11 port message. 12

77. (New) A computer readable media, comprising:

said computer readable media having instructions written thereon for execution on a processor for the practice of a method of operating a router, the method having the steps of,

receiving a data packet travelling in a downstream direction at a first port;

transmitting a replica of said data packet from a second port in said downstream direction;

8	computing a loss of packets on selected ports of said router;	
9	calculating, in response to said loss of packets, a loss rate statistic; and	
10	transmitting an outgoing loss report message through said first port in an upstrear	
11	direction, said outgoing loss report message containing said loss rate statistic in a field of	
12	said outgoing loss report message.	
1	78. (New) Electromagnetic signals propagating on a computer network, comprising:	

78. (New) Electromagnetic signals propagating on a computer network, comprising: said electromagnetic signals carrying instructions for execution on a processor for the practice of a method of operating a router, the method having the steps of, receiving a data packet travelling in a downstream direction at a first port; transmitting a replica of said data packet from a second port in said downstream direction; computing a loss of packets on selected ports of said router; calculating, in response to said loss of packets, a loss rate statistic; and transmitting an outgoing loss report message through said first port in an upstream direction, said outgoing loss report message containing said loss rate statistic in a field of said outgoing loss report message.
